

Chapter 1: Database: Introduction

Why Database? 1-2
 Data File Environment 3
 Drawbacks of the Conventional Data File Environment 4-5
 Difficulties in Integrating Data Before Database Technology 6-7
 Database 8
 Database Management System Objectives 9
 Data Independence 10
 Database Architecture: Two Stages of Data Independence 11-13
 Database Design and Performance 14-17
 Data Administration 18-20
 Phases of the Database System's Life Cycle 21

Chapter 2: Data Models

Data Models 1-2
 What is a Data Model? 3
 Relationships within a Data Model 3
 Relationships between Entities and Between Attributes 4
 Relationship between Two Entities 5-6
 Relational Data Model 7-8
 Terminology: Summary for Relational Data Model 9
 Properties of the Relational Data Model 10
 A Relational Database 11
 Advantages of a Relational Data Model 12
 Disadvantages of a Relational Data Model 13
 Database Management Systems 14
 The Hierarchical Data Model 15-17
 Database Management Systems 18
 Hierarchical Data Model 18
 Network Data Model 19
 CODASYL: Conference on Data Systems Languages 20
 DBTG: Database Task Group 21-22
 Hierarchical Structure Defined with the Help of Set Types 23-24
 DBTG Data Model 25-26
 File Inversion Techniques 27-28
 Properties of Inverted Files 29
 Database Management Systems 30
 File Inversion 31
 When to Implement a Data Dictionary 32
 Data Definition Guidelines 33

Chapter 3: Database Design - Conceptual Model

Database Design - Conceptual Model 1
 Data Analysis 2-3
 Relational Concepts for the Design Process 4
 Graphical Representation of Normal Forms 5
 Unnormalized Relation 6-7
 Patient - and - Surgeon Relation 8-9

Chapter 6: Implementation of the Access Methods

Hierarchical DBMS 1
 IMS Database Structure 2
 Physical Database Structure for IMS 3
 IMS Terminology 4
 Internal Model Access Methods of IMS 6
 Hierarchical Direct Access Method - HDAM 7
 IMS Access Methods 8
 Physical Pointers 9
 Secondary Indexing 10
 Secondary index - Terms 11
 Logical Relationships with IMS 12
 Unidirectional Logical Relationship 13
 Logical View 14
 Two Physical Databases with Two Unidirectional Logical Relationships 15-16
 Two Possible Logical Views 17
 Two Physical Databases with Two Unidirectional Logical Relationships 18
 Two Physical Databases with Virtually Paired Bidirectional Logical Relationship 19
 Rules for Logical Relationships 20
 Logical Views - IMS 21

Chapter 7: Database Design Physical Model

IMS Languages 1
 Defining the Data 2
 IMS Control Blocks 3
 DBD: Database Description 4
 DBD 5
 Physical DBD 5
 Logical DBD 5
 Creation of DBD 6
 Use of DBD 7-8
 PSB: Program Specification Block 9
 PCB 10
 Types of PCBs 11
 Creation of PSB - PCBs 12
 Use of PSB 13
 Types of PSBGEN Statements 14
 Logical View 16
 PSB 17
 ACB Maintenance Utility 18
 ACB 19
 Application Control Blocks 19
 DBDs for Secondary Index on Customer Data Base 20
 Indexed DBD 20
 Data Manipulation Language 21
 DB PCB MASK 22
 DL/1 Call Format 23
 DL/1 DB CALL Function Codes 24
 DL/1 DC CALL Function Codes 25
 DL/1 System Service Call Function Codes 26

Graphical Representation of Entities 10-11
 Data Elements or Attributes 12-13
 Third Normal Form Relations 14
 Conceptual Model 15

Chapter 4: Data Storage and Access Methods

Physical Sequential 1
 Indexed Sequential 2
 Indexed Sequential Access Method 3-4
 Indexed Random 5
 Indexed Random Access Method 6-7
 Inverted 8
 Inverted Index for Patient's Number 9
 Direct 10
 Direct Access Method 11
 Hashing 12
 Hashing Access Method 13
 External Model - Logical Views 14
 Access Methods 15-16
 Dependency Access Methods 17
 Set Member Relation Rules for Network Data Model 18
 Parent or Owner Access Methods 19
 Pointers 20
 Direct Pointer 21
 Relative Pointer 22
 Symbolic Pointer 23
 Pointers 24

Chapter 5: Database Design - Logical Model - Hierarchical

Mapping to a Hierarchical Data Model 1
 Conceptual Model 2
 Resolution of Multiple Parenthood 3-4
 Two Created Parents 5-6
 IMS Logical Model 7
 Logical Model with One Hierarchical Tree 8
 Logical Model with Two Hierarchical Trees 9-10
 A Hierarchical Tree 11
 Logical Model with One Hierarchical Tree 12
 An External Model 13

SSA: Segment Search Argument 27-28
 Command Codes 29-30
 Control: IMS and Application Program - Batch 31
 IMS Library Datasets 32
 IMS On-line Environment 33
 Recovery/Restart 34
 Basic Recovery 35
 DL/1 Recovery 36
 IMS Utilities 37
 Generation Utilities 38
 Database Utilities 39
 Log Maintenance Utilities 40
 Database Recovery Utilities 41
 Performance Reporting and Service 42
 IMS Complementary Products 43

Chapter 8: Banking Environment - Case Studies

Major Areas of Expertise Needed by the Designer of the Physical Model of a Database 1
 IMS Hierarchical Database Management System 2
 Developing Guidelines 3
 Segment Design Considerations 4
 Database Design Guidelines 5
 HSAM 6
 HISAM 7
 HIDAM 8
 HDAM 9
 Evaluate the Physical Model of a Database 10
 Assumptions for the Database Design Analysis 11
 Space Estimates for IMS 12
 Subtree Size 13
 Time Estimates - IMS: 14
 References 15
 "Popular Bank" 16
 Reports 1 - 3 17
 Assumptions About the Environment of Popular Bank 18
 Determine the Data Elements Referenced in Every Report Individually 19
 Cross-Reference Table Between Data Elements and Reports 20
 Branch Manager Report - Exception 21
 Branch Manager Report - Weekly Exception Summary 22
 Branch Loan Status 23
 Teller Cash Drawer 24
 Teller Audit Report 25
 Inquiry Transaction 26
 Deposit/Withdrawal Transaction 27
 Design a Logical Model of a Database 28
 Mapping to a Hierarchical Data Model 29
 Design a Physical Model of a Database 30
 Segment Sizes 31
 Segment Frequencies 32

Chapter 9: University Environment - Case Study

Catalog..... 1
Instructor Record..... 2
School Report..... 3
Assumptions about the Environment of the "University" 4
Designing a Database for a University Environment..... 5
Course Listing 6
Classroom Assignments/Semester 7
Catalog..... 8
Alumni 9
Student Information - To be Updated Every Semester 10
Instructor Record..... 11
School Report..... 12
The Resulting Third Normal Form Relations are:..... 13
Draw a Conceptual Model on the Basis of the Third Normal Form Relations 14
Conceptual Model..... 15
Mapping to a Hierarchical Database 16
Elimination of Transitivity 17
Logical Model 18
External Model for Student Schedule List/Semester 19
