

Chapter 1: REXX: Introduction

REXX - What is it 1
REXX Language Featureset 1
REXX Language Components 3
REXX Program Location 4
Quotes and Strings 5
Continuation 6
Instruction - Types 7
REXX Procedure - Execution 8
Explicit Execution 8
Implicit Execution 9
Allocation Procedures - Example 10
ALTLIB Command 11
TSOLIB Command 12

Chapter 2: REXX Statements

Variables 1
Variable Name 1
Simple Variable 1
Compound Variables 2
Expressions 4
Constants 4
Operators 4
Comparison Operators 5
Logical Operators 7
Concatenation Operation 8
IF/THEN Statement 9
NOP: No Operation Instruction 10
SELECT Statement 11
DO Loops 13
DO FOREVER Loop 15
LEAVE and ITERATE Instructions 16
DO WHILE and UNTIL Instructions 17
EXIT Statement 19
SIGNAL Statement 20
Condition Traps 21

Chapter 3: Functions and Subroutines

CALL and RETURN 1
Function - Types 4
Coding Functions in a Program 4
Subroutines 6
Variable - Sharing 6
Built-in Functions 8
DATATYPE Function 9
FORMAT Function 11
TRUNC Function 12

| | |
|--------------------------------|----|
| SUBSTR Function | 13 |
| LENGTH Function | 13 |
| COPIES Function | 14 |
| CENTER Function | 15 |
| LEFT and RIGHT Functions | 15 |
| POS Function | 17 |
| FIND Function | 18 |
| OVERLAY Function | 18 |
| COMPARE Function | 19 |
| ABBREV Function | 20 |
| VERIFY Function | 21 |
| TRANSLATE Function | 23 |
| DATE Functions | 25 |
| TIME Function | 26 |
| USERID Function | 27 |

Chapter 4: Application Development

| | |
|--|----|
| Parsing Strings | 1 |
| Parsing Instructions | 2 |
| Parsing Techniques | 4 |
| Blank Separator | 4 |
| String Separator | 5 |
| Column Positions | 6 |
| Parsing Data | 8 |
| Parsing Separators | 9 |
| Examples: PARSE VAR | 9 |
| PARSE Statement - Recommendation | 11 |
| SOURCELINE Function | 12 |
| REXX Language Debugging | 13 |
| SAY Statement | 13 |
| Batch Trace Debugging | 14 |
| Interactive Debugging | 15 |
| TRACE Output | 16 |
| TSO/E External Functions - LISTDSI | 17 |
| Predefined Variable Names and Content | 18 |
| OUTTRAP Function | 19 |
| Example: Display Datasets Allocation using OUTTRAP | 20 |
| SYSDSN Function | 21 |
| Returned Messages | 21 |
| SYSVAR Function | 22 |
| MSG Function | 23 |
| MVSVAR Function | 24 |
| PROMPT Function | 25 |

Chapter 5: Data Structures, Input/Output, and Host Environment

| | |
|--|----|
| Data Stack and Queue | 1 |
| Buffer Creation and Data Item Management | 3 |
| QUEUE Instruction | 4 |
| PUSH Instruction | 5 |
| PULL Instruction | 6 |
| Buffer - Creating on the Data Stack | 7 |
| I/O: Input/Output in REXX | 8 |
| EXECIO Command for Processing Data | 8 |
| File Allocation | 9 |
| ALLOC Command | 9 |
| FREE Command | 14 |
| EXECIO: Reading and Writing | 15 |
| EXEC - Invoking from an EXEC | 18 |
| Host Command Environment | 19 |
| SUBCOM Command | 20 |
| REXX Components in Non-TSO Address Space | 20 |
| REXX - Execution | 21 |
| Executing REXX: TSO Address Space in Batch | 21 |
| Executing a REXX EXEC in non-TSO Environment | 21 |
| ALTLIB - z/OS Features | 22 |

Chapter 6: REXX Pitfalls

| | |
|--|----|
| REXX Language - Coding and Debugging | 1 |
| Developer Guidelines | 1 |
| Uninitialized Variables | 2 |
| Variable Scoping | 3 |
| PARSE Instruction | 5 |
| WITH - Incorrect Use | 5 |
| Unexpected Blanks in Parsed Results | 5 |
| Mismatched Arguments and PARSE Pattern | 6 |
| CALL Statement Syntax | 7 |
| Compound Variables | 8 |
| Case Sensitivity in a Compound Variable | 8 |
| Inability to Have 'Constant' Values in Tails | 9 |
| Inability to Have Expressions in Tails | 11 |
| Strict versus Non-strict Comparison | 12 |
| Line Continuation | 13 |
| Explicit Concatenation | 14 |
| Uppercasing by ARG and PULL | 15 |
| Null Strings versus Omitted Strings | 16 |
| Case Sensitivity of Labels | 17 |
| Condition Handling | 18 |

Chapter 7: REXX: DB2 and VSAM

REXX and DB2 1
REXX and DB2 Configuration 1
SQLCA in REXX DB2 2
SQL and REXX Data Types 3
SQL Statements - Supported 4
DB2 Language Support 6
DSNREXX Host Command Environment 7
Isolation Level 8
Predefined Cursor and Statement Names 9
REXX to Retrieve a Single Row 10
Display SQLCA Information 11
Retrieve All the Rows in a Resultset 12
Update a Table 13
REXXTOOLS to Access VSAM 14
Example: REXX for Accessing VSAM 15

Chapter 8: REXX and Dialog Manager Services

Dialog Manager Services 1
Dialog and Libraries 2
Libraries Allocated for ISPF/Dialogs 3
Dialog Variables 3
Messages 4
ISPSTART 5
Dialogs - Writing 6
Variable Services 6
Compound Procedures and Variables 7
VGET, VPUT, and VERASE Services 7
Dialog Program: Example 8
REXX to Display Panel 10
Coding the Panel 11
System Variable - Time and Date 12
Return Codes from Services 12
BROWSE- Browse a Dataset 13
