Scale Definitions:
1) Strongly Disagree 2) Disagree 3) Neutral 4) Agree 5) Strongly Agree

For the duration of the course, was each instructor on site? **Yes**

Access to comments in ITEMS is limited to authorized individuals.
Comments:
MOST VALUABLE:

Script writing, UNIX comments.

Changes to practice.

Binder full of info.

Lab exercises.

LEAST VALUABLE:

Few labs or opportunities to practice or try out what we were learning.

Not enough exercises or practice scripts.

Classroom environment, chair, lightly color scheme availability or Internet for checking e-mails.

ADDITIONAL COMMENTS:

During course our division had a mandatory training session which made it impossible for us (4 students) to attend. Korn Shell programming part of class. Otherwise- a course that provides good learning materials afterward for resource. Good coverage of the VI editor.

The facilities were disappointing. We need to e-mail our office everyday. We had one machine for 15 people in a room which was often locked. We could not print out our programs or use a copy machine.

Availability of quick, easy access to e-mail is needed to allow students to keep up to date with important projects that cannot be put on hold while they are in training. Accommodations of students with laptops by providing LAN connectivity would be helpful as well.
