

Chapter 1: Addressing

Addressing: Purpose and Function 1
 Addressing within Source Modules 1
 Establishing Addressability 2
 Base Register Instructions 3
 USING Instruction 4
 Labeled USING Instruction 5
 Dependent USING Instruction 6
 DROP Instruction 7
 Qualified Addressing 8
 Dependent Addressing 9
 Establishing Residence and Addressing Mode 10

Chapter 2: Statements

*PROCESS Statement 1
 AMODE Instruction 2
 CEJECT Instruction 3
 CNOP Instruction 4
 COPY Instruction 5
 CSECT Instruction 6
 DC Instruction 7
 DSECT Instruction 8
 EJECT Instruction 9
 EQU Instruction 10
 ICTL Instruction 11
 SPACE Instruction 12
 START Instruction 13
 TITLE Instruction 14

Chapter 3: Bit Operations

Bit Operations 1
 Shift Operations 2
 SHIFT LEFT SINGLE 3
 SHIFT LEFT DOUBLE 4
 SHIFT LEFT DOUBLE LOGICAL 5
 SHIFT LEFT SINGLE LOGICAL 6
 SHIFT RIGHT DOUBLE 7
 SHIFT RIGHT DOUBLE LOGICAL 8
 SHIFT RIGHT SINGLE 9
 SHIFT RIGHT SINGLE LOGICAL 10
 OR 11
 OR IMMEDIATE 13
 AND 14
 AND IMMEDIATE 16
 EXCLUSIVE OR 17
 TEST UNDER MASK: TEST UNDER MASK HIGH, TEST UNDER MASK LOW 19
 TEST AND SET 21

Chapter 4: Assembly Errors

Diagnostic Facilities 1
 High Level Assembler Messages 2
 Message Descriptions 3
 MNOTE Statements 4
 Reference Information for Statements in Error 5
 MHELP: Macro Trace Facility 6

Chapter 5: Table Handling

Table: Handling - Purpose and Function 1
 RX Instruction Formats 1
 Arrays 2
 Tables 3
 LOAD Macro - VSE 6
 CDLOAD Macro - VSE 7
 LOAD - OS 8
 DELETE (OS) 9
 Initializing 10

Chapter 6: Floating-Point

Floating-Point: Purpose and Function 1
 Floating-Point Registers 2

Chapter 7: Assembler Listing

High Level Assembler Listing 1
 ESD: External Symbol Dictionary 2
 Ordinary Symbol and Literal Cross Reference 4
 Other Listings 5
 ASMAOPT Options 6
 Assembler Options 6

Chapter 8: More Logical Instructions

ND 1
 OR 2
 Or 3
 Setting Bit Switches 4
 Exclusive OR 5
 Testing 7
 Inserting and Storing One Byte 8
 IC: Insert Character 8
 STC: Store Character 8
 EXECUTE 9
 Branch on Index Low or Equal 10
 Branch on Index 11
 Branch on Index High 11

Translate 12
 Translation 13
 Translate and Test 14
 CLM 15
 ICM 16
 Store Character Under Mask 17

Chapter 9: MVS 31-Bit Addressing

History 1
 Addressing Modes 2
 31-Bit Addressing: When to Use 3
 Assembler Programming with 31-Bit Mode 3
 BSM - Branch and Set Mode 4
 BASSM - Branch and Save and Set Mode 4
 BASSM and BSM: Examples 5

Chapter 10: Macros: Using and Coding

Macro Language 1
 Macro Definition 2
 Model Statements 3
 Processing Statements 3
 Macro Instruction 4
 Source and Library Macro Definitions 5
 Conditional Assembly Language 6
 Macro Definitions: Specifying 7
 Model Statements 8
 Variable Symbols as Points of Substitution 9
 Symbolic Parameters 10
 System Variable Symbols 11
 Operands 12
 Positional Operands 12
 Keyword Operands 12
 Conditional Assembly Instructions 13
 Elements and Functions 14
 SET Symbols 15
 SET Symbol Specifications 15
 Sequence Symbols 16
 Instructions 17
 GBLA, GBLB, and GBLC Instructions 17
 LCLA, LCLB, and LCLC Instructions 18
 SETA Instruction 18
 SETB Instruction 19
 SETC Instruction 19
 AIF Instruction 19
 AGO Instruction 20

Chapter 11: Addressing, Sectioning, and Linking

Addressing 1
 Source Modules: Establishing Addressability 1
 Base Register Instructions 1
 Qualified Addressing 2
 Dependent Addressing 2
 Program Sectioning and Linking 3
 Size of Program Parts 3
 Communication Among Program Parts 3
 Control Sections 4
 Executable Control Sections 5
 Unnamed Control Section 5
 Reference Control Sections 6
 Dummy Control Sections 6
 Dummy Control Section: How to Use 7
 Common Control Sections 8
 Common Control Section: How to Use it 8
 External Dummy Sections 9
 External Control Section: How to Use 9
 Location Counter Setting 10
 External Symbol Dictionary Entries 11
 Residence and Addressing Mode: Establishing 12
 Referring to External Data 13
 Branching to an External Address 14

Chapter 12: VSAM Programming

VSAM: Purpose and Function 1
 Subparameters with GENCB, MODCB, SHOWCB, and TESTCB 2
 VSAM Macros: List, Execute, and Generate Forms 3
 ACB Macro: Generate an Access Method Control Block at Assembly Time 4
 MODCB Macro: Modify an Access Method Control Block 7
 RPL Macro: Generate a Request Parameter List at Assembly Time 8
 OPEN Macro: Connect Program and Data 9
 OPEN Macro: Opening Two Data Sets 10
 CLOSE Macro: Disconnect Program and Data 10
 CLOSE Macro: Close an ACB 11
 GET Macro: Retrieve a Record 12
 Keyed-Sequential Retrieval: Forward - KSDS, RRDS 13
 Point Macro 14
 Keyed-Sequential Retrieval: Backward - KSDS, RRDS 14
 GET Macro 15
 Addressed-Sequential Retrieval: ESDS 15
 PUT Macro: Write a Record 17
 Keyed-Sequential Insertion: KSDS, Variable-Length RRDS 17
 Recording RBAs When Loading a KSDS 18
 Keyed-Direct Insertion: KSDS, RRDS 19
 GET and PUT Macros 21
 Keyed-Sequential Update: KSDS, RRDS 21
 SHOWCAT Macro: Display the Catalog 23

SHOWCAT: Standard Form..... 25
 SHOWCAT: List Form..... 25
 SHOWCB: Display Fields of an Access Method Control Block..... 26
 SHOWCB Macro Display an Access Method Control Block..... 27

Chapter 13: Calls and Linkage

Subroutines: Purpose and Function..... 1
 Save Areas..... 2
 MVS Considerations 5
 Register Usage 6
 CALL Macro 7
 Parameter Lists 8
 Variable Parameter List..... 9
 Branch and Link 10
 External References and Entry Points 12
 EXTRN 12
 V-type Constant 13
 ENTRY 13
 Long Control Sections..... 14

Chapter 14: VSAM Macros

VSAM and Assembler Language 1
 ACB..... 2
 EXLST 4
 RPL 5
 OPEN 8
 CLOSE 9
 TCLOSE 10
 MODCB 11
 SHOWCB 12
 GET 13
 PUT 13
 POINT 13
 ENDREQ11 13
 ERASE 13
 Return Codes 14
 Feedback..... 14
