Dear Dave,

Because you've used other books in our .NET series, I'd like to send you a free review copy of our newest book, "Murach's ADO.NET Database Programming with VB 2005." Just let me know what mailing address you'd like me to send it to, and I'll get it out right away.

If you'd like to know more about this book first, it's described in detail at our web site at http://www.murach.com/instructors/adv2.htm.

Briefly, though, it's a complete course in building professional database applications for both Windows and the web. As a result, it moves from showing how to prototype applications using the 2.0 data sources feature to building true 3-layer applications using the 2.0 object data sources feature to incorporating features like untyped datasets, XML data handling, and Crystal Reports into applications whenever appropriate.

So I hope you'll consider using this book in your training program. If you have any questions about it, about our other books, about pricing, or about anything else, please let me know.

And thank you so much for your business – it means a lot to us!
