Subject:	WebSphere and DB2 training needs ...

Hi David,

Class Trainers has need for an instructor who can teach either or both of the following:

- WebSphere Application Server V7 Administration on Windows which matches to IBM Course - Code WA370 for 7x Users in California.
- DB2 9 Database Administration Workshop for Windows, 11 people, also in California.

If you have courseware it would make it that much more attractive to the client. If you don't, then we will need a suggestion as to which third part material you would use.

Please note that in this market, pricing seems to make or break a sale, so please be as aggressive as you can.

If you are interested, please let us know, ASAP.

Take care,

Doug
